**3** : Water inflamed - 20mm (15/21)

**4** : Automatic emptying - 25 mm (20/27) to connect to your drain

#### Automatic functions

##### **1. Auto-filling:**

The water infly electrovan will open automatically once the system is started and will fill

---

until the water level reaches the maximum level. If the water level is still below the minimum water level 10 minutes after the water system defaults to operate.

## **2. Automatic heating**

The generator will compare the measured ambient temperature with the programmed temperature

## **3. Automatic drainage:**

When time is up or the ON/OFF button is pressed down, the system automatically drains and displays "dd" on the LCD screen.

The drain valve opens to drain. Shortly thereafter, the system will open the intake valve in order to cool the tank and the resistance. The system will automatically shut down after drainage.

Special hammam air extraction fan

supplied fan (100-plus sheath compatible)

be careful to add a 12vdc transformer - switch in order to trigger it.

Technical feature: Waterproof index IP66 Cone size 6" Outer diameter 175.5mm Chassis size 145mm Depth 69mm Impedance 40h Frequency range 120HZ-20KHZ Max power 80w Grid Stainless aluminium Warranty 2 years

9 3/4 filter door with its silicophosphate cartridge

Technical feature:

- Two-part filter equipped with a cartridge center to facilitate their replacement
- Events equipped with toric seals for perfect waterproofing.
- Brass inserts to avoid distorting tapping, a source of subsequent leaks.

Maximum speed with cartridges: 1500L/h, Frost Fears, Entry/Exit 3/4 inch.

- Mounts before the devices to be protected

- 
- Entry/Exit 20/27
  - Maximum static pressure 5 bars
  - The installation of a pressure reducer set to 4 bars is mandatory.
  - It is recommended to install an anti-return valve at the exit of the filter door
  - An anti-pollution valve upstream of the product and downstream of the water meter is required.
  - Fears frost
  - Climb to a dry place away from the light.
  - Do not use sealing paste or seal paste, preferably use Teflon
  - Leave a space of at least 5 cm under the tanks to facilitate maintenance
  - 200 m<sup>3</sup> treatment

#### Maintenance:

- Before changing the cartridge, cut off the water and unscrew the vents to put atmospheric pressure
- Loosen the tank with the key, then by hand
- Change the cartridge, and grease the toric seal of the tank with dietary grease
- Replace the tank and tighten by hand, do not tighten the key. The key is only used to loosen the filter tanks
- When re-watering, turn on the vents to flush out the air

- 
- The silicophosphate cartridge is to be replaced about every 6 months. Lifespan depends on the quality of your water and your use.
  - If not used for more than 2 days, run the water for 5 minutes before use
  - We recommend replacing the cartridge every 6 months to 1 year
