

Premium 6 Kw sauna stove with built-in stainless steel finishes controls

Product description:

Premium 6 Kw sauna stove with built-in stainless steel finishes controls

This sauna stove with premium finish will allow optimal use of your sauna.

The built-in control of the stove allows you to directly adjust the temperature and duration of the session without having to leave the room

The stove is equipped with a timer button to program the duration of the session

The stove has a thermostat button to adjust the desired temperature

Its heating power is 6 kW hour, it can heat a sauna cabin between 5 and 7 m³ (the electrical connection can be in 230 volts monophasé and triphasé).

This stove allows traditional and wet dry sauna sessions by watering the stones with a ladle

- The sauna dry from 90 to 110 degrees. It is characterized by a very high temperature in a very dry atmosphere

-
- The wet sauna from 70 to 90 degrees Celsius
 - The traditional Finnish sauna with a relative humidity of 15-25%

Stones sold separately

Domestic or professional use
