Sauna 9kw with accessories Pack

Stove Sauna 9Kw with built-in commands

Integrated into the stove command to set directly the temperature and duration of the session without having to leave the room

The stove is equipped with a timer to program the duration of the session and a thermostat knob to adjust the desired temperature

This stove is a wall-mounted model, but can also be placed in the middle of your room

Has heating power 9 Kw / hour, it can heat a cabin sauna between 8 and 12 m³ (the electrical connection can be in 230 volts single-phase or three-phase)

This stove allows sessions of dry sauna, traditional and humid by watering the stones using a ladle provided in the pack

The dry sauna of 90 to 110 degrees, is characterized by a very high temperature in a very dry atmosphere

The wet sauna, 70 to 90 ° c or traditional Finnish sauna is practiced with a relative humidity of 15-25%. Heated stones, and then we throw cold water on them to make steam. We finish the sauna by a strong wet steam releases (1 to 3 ladles of water on the stones)

-Installation must be carried out by a professional electrician, electrical line must be connected live to the electric meter with a suitable circuit breaker

The stones are included in the pack
